

Introducing Test Recorder

Maxim Naidenov, Hristo Manchev, SAP
July 9th/10th, 2020

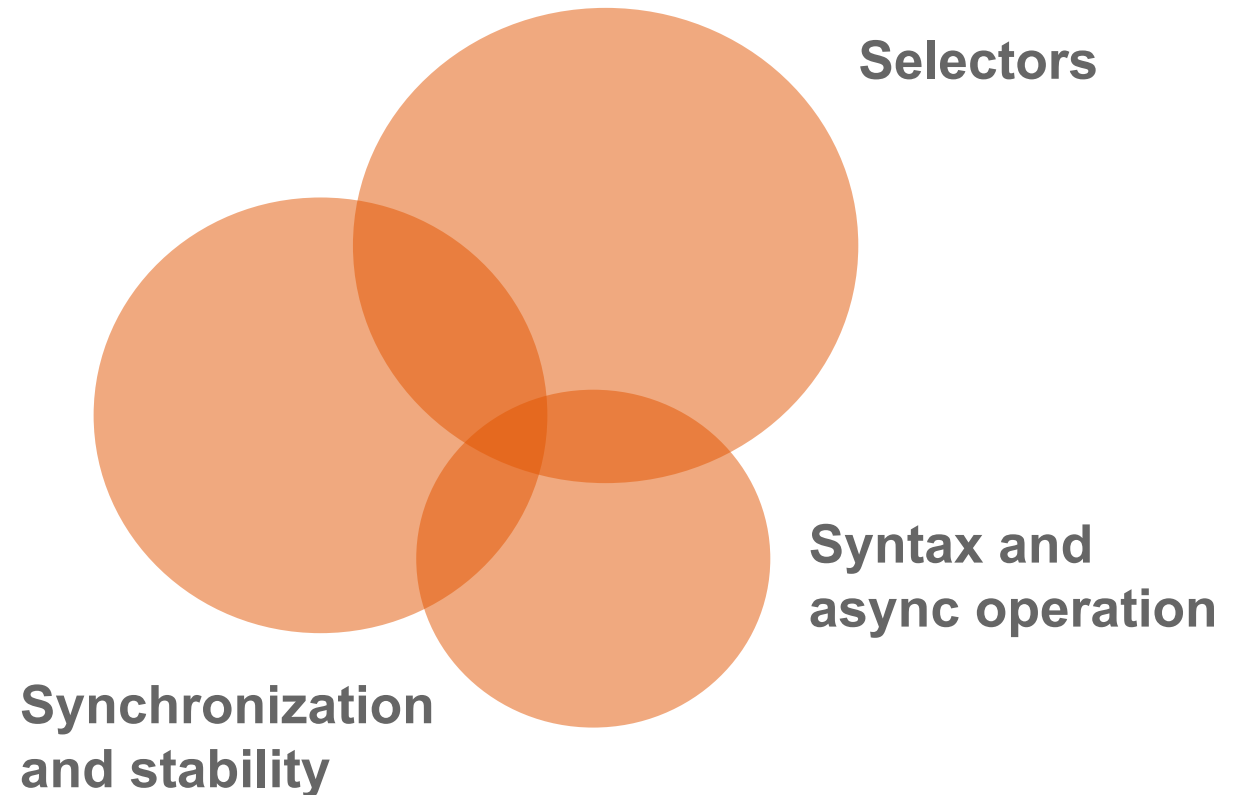

Motivation

Hardest part in (UI5) testing is creating good selectors

- Requires good understanding of UI5
- Requires good knowledge of Web technologies
- Requires know-how and experience with creating and maintaining test

Top challenges with UI5 testing

What is Test Recorder

Part of UI5 distribution (starting from 1.74)

Generates a control locator for a screen element

Generates the best locator by crawling the control tree

Supports **OPA**, **UIVeri5** and any other tool that uses **UI5 Automation API**

The screenshot displays the SAP S/4HANA Test Recorder interface. The top section shows a list of tasks under 'My Inbox' and 'All Tasks (4)'. The main area displays a 'Review Purchase Order Accruals' screen with details for a 'Standard PO' (Company Code: 1010, Purchase Order: 4500002117). The bottom section is divided into three panels: 'Control Tree' (showing a tree structure of SAP controls), 'Snippet' (showing a code snippet for a control locator), and 'Common Info' (showing properties and bindings for the selected control).

Control Tree

```
<sap.m.List>
  <sap.m.ObjectListItem>
    <sap.m.Text>
      <sap.m.ObjectAttribute>
        <sap.m.Text>
          <sap.m.ObjectStatus>
            <sap.m.ObjectListItem>
              <sap.m.Text>
                <sap.m.ObjectAttribute>
                  <sap.m.Text>
                    <sap.m.ObjectStatus>
                      <sap.m.ObjectListItem>
                        <sap.m.Text>
                          <sap.m.ObjectAttribute>
                            <sap.m.Text>
                              <sap.m.ObjectStatus>
                                <sap.m.ObjectListItem>
                                  <sap.m.Text>
                                    <sap.m.ObjectAttribute>
                                      <sap.m.Text>
```

Snippet

```
this.waitFor({
  controlType: "sap.m.ObjectAttribute",
  viewName: "cross.fnd.fiori.inbox.view.S2",
  bindingPath: {
    path: "/TaskCollection(SAP__Origin='LOCAL_TGW', InstanceID='000000064600')",
    propertyPath: "CreatedByName"
  }
});
```

Common Info

Property	Value	Type
title		string
text	SAP Workflow Runtime	string
active	false	boolean
textDirection	Inherit	sap.ui.core.TextDirection

What is next

What is in our plan

- Record assertions from properties
- Generate meaningful function names
- Improve selector generator with freestyle applications

What is outside of our roadmap

- Full-fledged IDE for test scripts in the browser
- Complete End-To-End Record and Replay tool

Test Recorder uses **UI5 Automation APIs** that you can also use.

Thank you.
